

Chameleons in imagined conversations:

A new approach to understanding
coordination of linguistic style in dialogs

Cristian Danescu-Niculescu-Mizil

Non-conscious coordination

When conversing, people non-consciously adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Non-conscious coordination

When conversing, people non-consciously adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967

Non-conscious coordination

When conversing, people non-consciously adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967
Head nodding	Hale and Burgoon, 1984

Non-conscious coordination

When conversing, people non-consciously adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967
Head nodding	Hale and Burgoon, 1984
Pause length	Jaffe and Feldstein, 1970
Backchannels	White, 1984
Self-disclosure	Derlenga et al., 1973
Linguistic style	Niederhoffer and Pennebaker, 2002

Non-conscious coordination

When conversing, people non-consciously adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967
Head nodding	Hale and Burgoon, 1984
Pause length	Jaffe and Feldstein, 1970
Backchannels	White, 1984
Self-disclosure	Derlenga et al., 1973
Linguistic style	Niederhoffer and Pennebaker, 2002

Communicative behaviors are **“patterned and coordinated, like a dance”**
[Niederhoffer and Pennebaker, 2002]

Non-conscious coordination

When conversing, people **non-consciously** adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967
Head nodding	Hale and Burgoon, 1984
Pause length	Jaffe and Feldstein, 1970
Backchannels	White, 1984
Self-disclosure	Derlenga et al., 1973
Linguistic style	Niederhoffer and Pennebaker, 2002

Communicative behaviors are **“patterned and coordinated, like a dance”**
[Niederhoffer and Pennebaker, 2002]

Non-conscious coordination

When conversing, people **non-consciously** adapt to one another's communicative behaviors. [Giles et al., 1991; Chartrand and Bargh, 1999]

Dimension	Canonical study
Posture	Condon and Ogston, 1967
Head nodding	Hale and Burgoon, 1984
Pause length	Jaffe and Feldstein, 1970
Backchannels	White, 1984
Self-disclosure	Derlenga et al., 1973
Linguistic style	Niederhoffer and Pennebaker, 2002

Communicative behaviors are **“patterned and coordinated, like a dance”**
[Niederhoffer and Pennebaker, 2002]

Linguistic style coordination

Linguistic style:

How things are said as opposed to **what** is said

Linguistic style coordination

Linguistic style:

How things are said as opposed to **what** is said

Example:

Client: “At what time does your shop close?”

Shopkeeper: “At five o’clock.”

Shopkeeper: “Five o’clock”

Linguistic style coordination

Linguistic style:

How things are said as opposed to **what** is said

Example:

Client: “At what time does your shop close?”

Client: “What time does your shop close?”

Shopkeeper: “At five o’clock.”

Shopkeeper: “Five o’clock”

[Levelt & Kelter, 1982]

Linguistic style coordination

**Linguistic coordination occurs:
instantaneously
non-consciously**

Linguistic style coordination

Linguistic style:

for us: function word class usage

Coordination is not just exact matching:

Client: “**At** what time does your shop close?”

Shopkeeper: “**In** two hours.”

Linguistic style coordination

When does it happen?

Linguistic style coordination

When does it happen?

face-to-face settings [Niederhoffer & Pennebaker, 2002]

- Watergate transcripts

Linguistic style coordination

When does it happen?

face-to-face settings [Niederhoffer & Pennebaker, 2002]

- Watergate transcripts

non-face-to-face settings [Reitter et al. 2006; Gonzales et al. 2010; N & P, 2002]

- phone conversations, online chat

Linguistic style coordination

When does it happen?

face-to-face settings [Niederhoffer & Pennebaker, 2002]

- Watergate transcripts

non-face-to-face settings [Reitter et al. 2006; Gonzales et al. 2010; N & P, 2002]

- phone conversations, online chat

non-real-time settings [Danescu-Niculescu-Mizil et al. 2011]

- Twitter conversations (involves a wide spectrum of relationship stages)

Linguistic style coordination

When does it happen?

face-to-face settings [Niederhoffer & Pennebaker, 2002]

- Watergate transcripts

non-face-to-face settings [Reitter et al. 2006; Gonzales et al. 2010; N & P, 2002]

- phone conversations, online chat

non-real-time settings [Danescu-Niculescu-Mizil et al. 2011]

- Twitter conversations (involves a wide spectrum of relationship stages)

Across a wide range of conversational settings.

Linguistic style coordination

Why does it happen?

Linguistic style coordination

Why does it happen?

Actively debated for the last 40 years.

[Ireland et al. 2011, Branigan et al., 2010]

disclaimer: we are not solving this debate today

Linguistic style coordination

Why does it happen?

Hypotheses:

Social motivation

- to gain the other's social approval [Giles 2008; Street & Giles, 1982]
- audience design [Clark, 1996; Bortfeld & Brennan, 1997]

Linguistic style coordination

Why does it happen?

Hypotheses:

Social motivation

- to gain the other's social approval [Giles 2008; Street & Giles, 1982]
- audience design [Clark, 1996; Bortfeld & Brennan, 1997]

Unmediated reflex [Pickering and Garrod, 2004; Chartand and Bargh, 1999]

- deeply embedded in the language-generation process

Linguistic style coordination

Why does it happen?

Does coordination occur when the interlocutors have no social motivations?

Hypotheses:

Social motivation

- to gain the other's social approval [Giles 2008; Street & Giles, 1982]
- audience design [Clark, 1996; Bortfeld & Brennan, 1997]

Unmediated reflex [Pickering and Garrod, 2004; Chartand and Bargh, 1999]

- deeply embedded in the language-generation process

Linguistic style coordination

Why does it happen?

Does coordination occur when the interlocutors have no social motivations?

Proxy question:

Does coordination occur when the dialog is **not generated** by the interlocutors (i.e., by the ones gathering social benefits)?

Linguistic style coordination

Why does it happen?

Does coordination occur when the interlocutors have no social motivations?

Proxy question:

Does coordination occur when the dialog is **not generated** by the interlocutors (i.e., by the ones gathering social benefits)?

Case study: scripted movie dialogs

220,000 **imagined** conversations between 9000 characters
from 617 movie scripts

Measuring coordination

Measuring coordination

Measuring coordination

VINCENT: Antwan probably didn't expect Marsellus to react like he did, but he had to expect a reaction.

Measuring coordination

VINCENT: Antwan probably didn't expect Marsellus to react like he did, but he had to expect a reaction.

JULES: He just massaged her feet, massaging someone's feet is nothing, I massage my mother's feet.

Measuring coordination

VINCENT: Antwan probably didn't expect Marsellus to react like he did, but he had to expect a reaction.

JULES: It was a foot massage, a foot massage is nothing, I give my mother a foot massage.

JULES: He just massaged her feet, massaging someone's feet is nothing, I massage my mother's feet.

Measuring coordination

VINCENT: Antwan probably didn't expect Marsellus to react like he did, but he had to expect **a** reaction.

JULES: It was **a** foot massage, **a** foot massage is nothing, I give my mother **a** foot massage.

Matching on article presence.

Measuring coordination

VINCENT: Antwan probably didn't expect Marsellus to react like he did, but he had to expect **a** reaction.

JULES: It was **a** foot massage, **a** foot massage is nothing, I give my mother **a** foot massage.

Matching on article presence.

But matching \neq coordination !

(e.g., chance, Tarantino likes articles, bad guys like articles)

Measuring coordination

What we want: how much *Jules'* inclusion of an article (say) **immediately triggers** the usage of articles in *Vincent's* reply?

What we don't want: how similar *Jules'* style is to *Vincent's* style in general or how consistent Tarantino's style is.

Measuring coordination

What we want: how much *Jules'* inclusion of an article (say) **immediately triggers** the usage of articles in *Vincent's* reply?

*Coordination*_(V to J)(art.) =

Measuring coordination

What we want: how much *Jules'* inclusion of an article (say) **immediately triggers** the usage of articles in *Vincent's* reply?

$$\text{Coordination}_{(V \text{ to } J)}(\text{art.}) = P(V^{\text{art.}} \mid V \text{ replied to } J, \overset{\text{Trigger}}{\underbrace{J^{\text{art.}}}})$$

Measuring coordination

What we want: how much *Jules'* inclusion of an article (say) **immediately triggers** the usage of articles in *Vincent's* reply?

$$\text{Coordination}_{(V \text{ to } J)}(\text{art.}) = P(V^{\text{art.}} \mid V \text{ replied to } J, \overset{\text{Trigger}}{J^{\text{art.}}}) - \underbrace{P(V^{\text{art.}} \mid V \text{ replied to } J)}_{\text{Control (for inherent similarity)}}$$

Measuring coordination

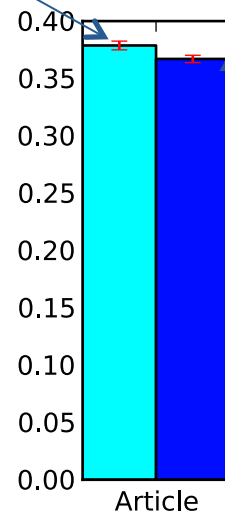

Overall coordination: average over all pairs of characters (B,A)

“Triggered” probability

$$P(B^{art.} | B \text{ replied to } A, A^{art.})$$

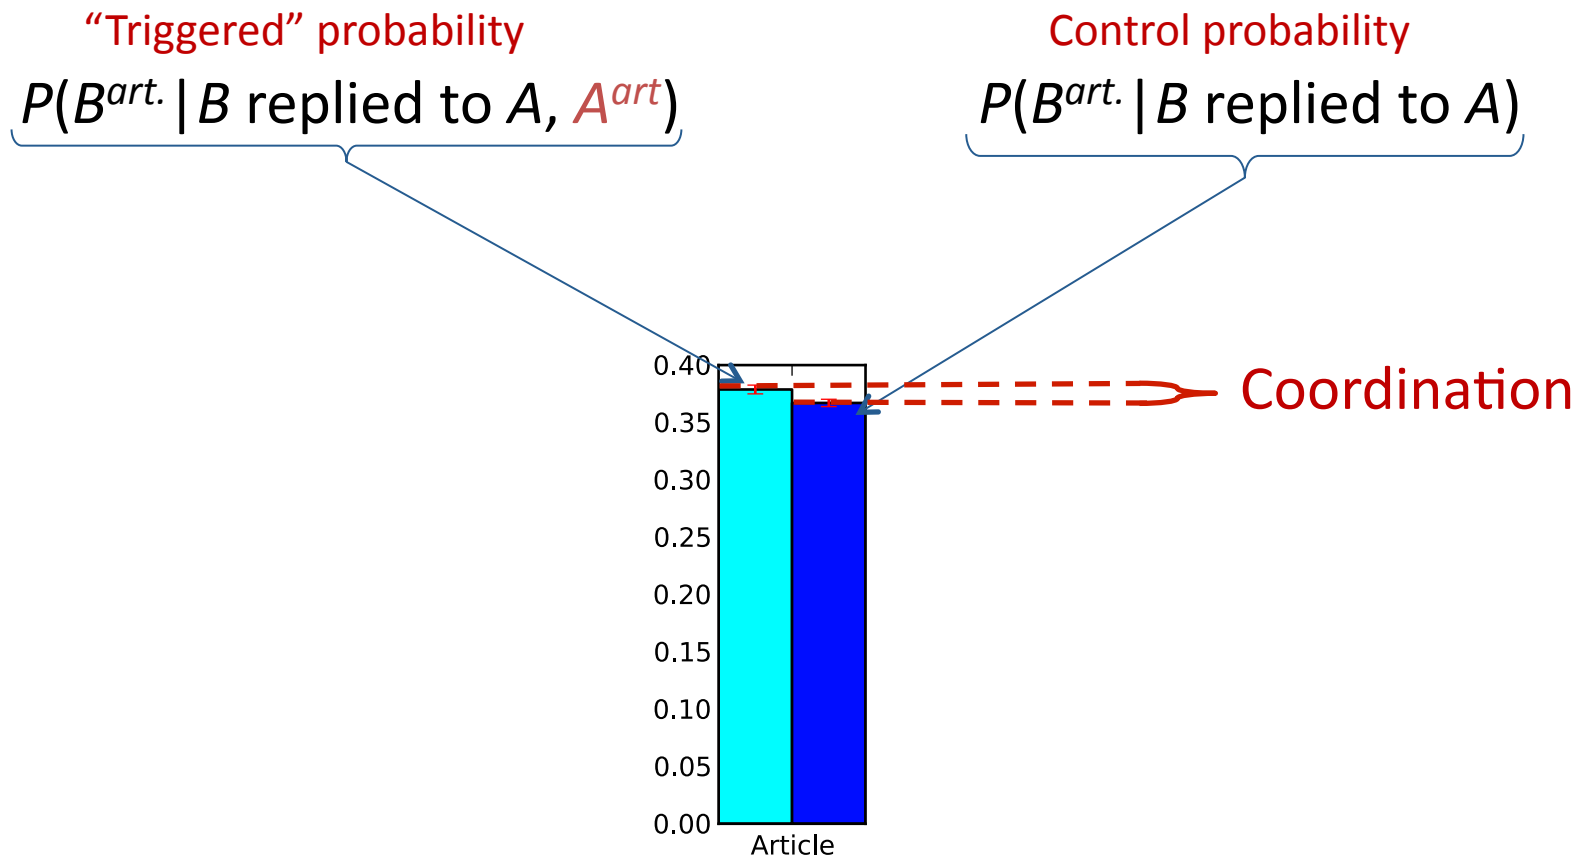

Control probability

$$P(B^{art.} | B \text{ replied to } A)$$

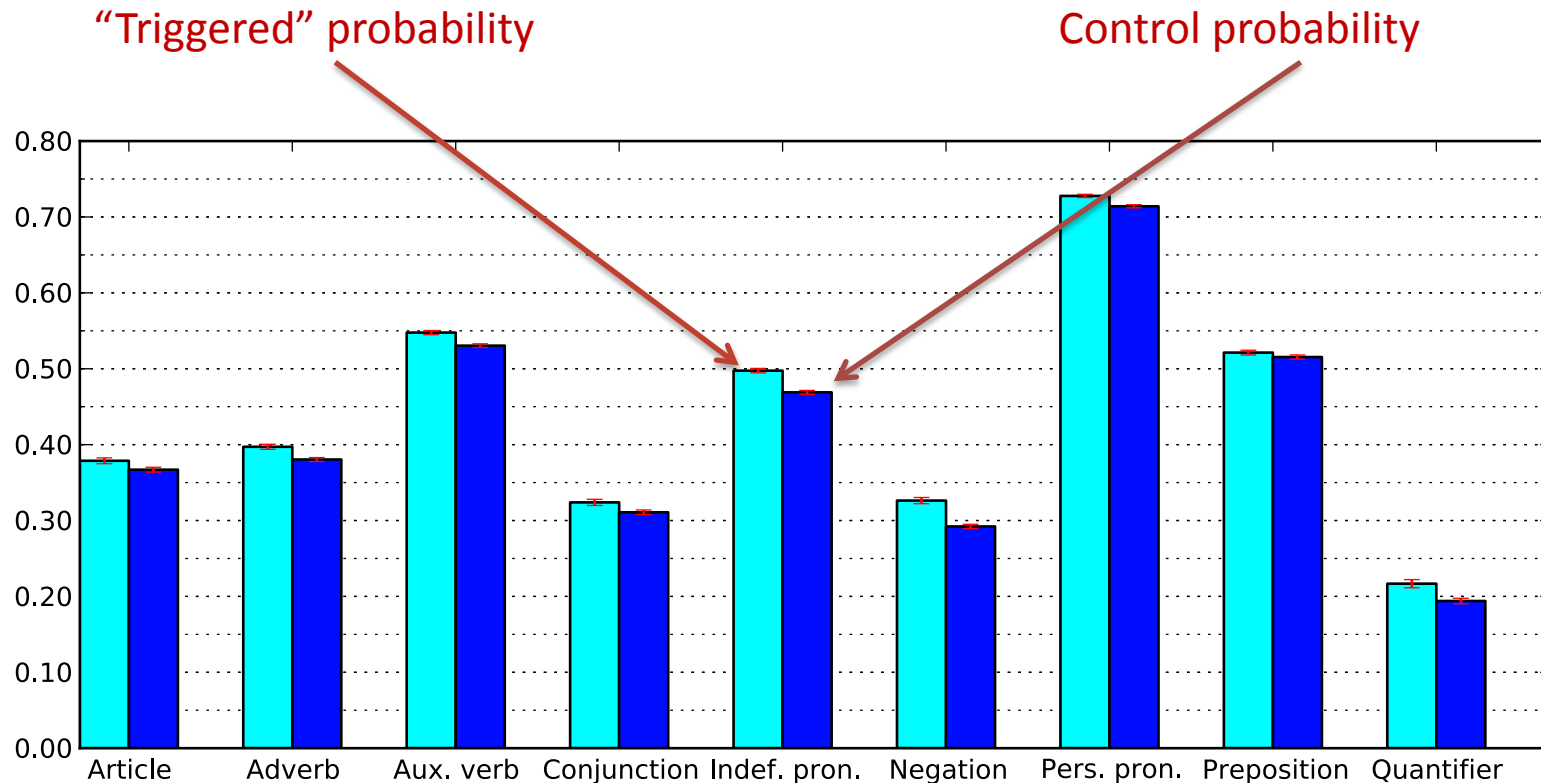

Measuring coordination

Overall coordination: average over all pairs of characters (B,A)

Movie characters coordinate!

Movie characters coordinate!

Statistically significant ($p < 0.001$) effect of **coordination on all 9 function word categories considered**

Movie characters coordinate!

Does coordination occur when the interlocutors have no social motivations?

Proxy question:

Does coordination occur when the dialog is **not generated** by the interlocutors (i.e., by the ones gathering social benefits)?

Yes!

Scriptwriters produce coordination despite not being the beneficiaries of the presumed social benefits

But what if ...

**... we are only observing the effect of
scriptwriters self-coordinating?**

But what if ...

**... we are only observing the effect of
scriptwriters self-coordinating?**

(we know people self-coordinate [Reitter et al. 2006])

Author self-coordination hypothesis

Coordination of Vincent to Jules:

Author self-coordination hypothesis

Coordination of Vincent to Jules:

Self-coordination of the **scriptwriter**:

Author self-coordination hypothesis

Coordination of Vincent to Jules:

Self-coordination of the **scriptwriter**:

... would be the same or more than:

Author self-coordination hypothesis

Coordination of Vincent to Jules:

... would be the same or more than the character self-coordination of J to J:

Self-coordination of the scriptwriter:

... would be the same or more than:

It is not author self-coordination !

Coordination

... it's actually less than
the **character self-coordination**

Movie characters vs. real people

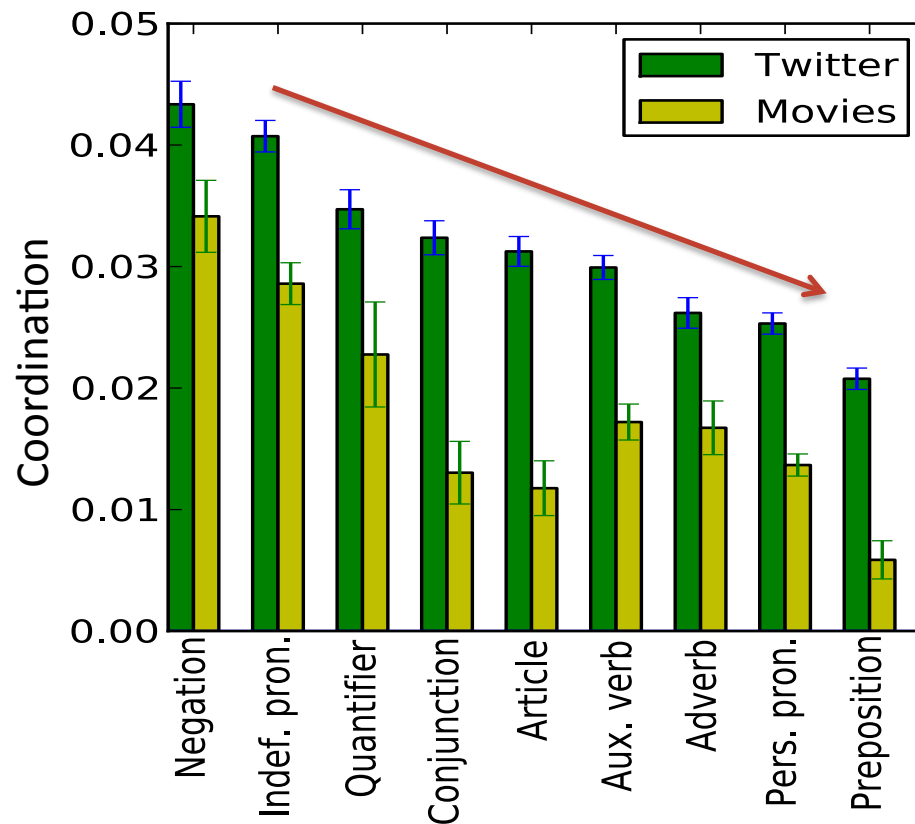

Movie characters vs. real people

Compare amount of coordination for each dimension:

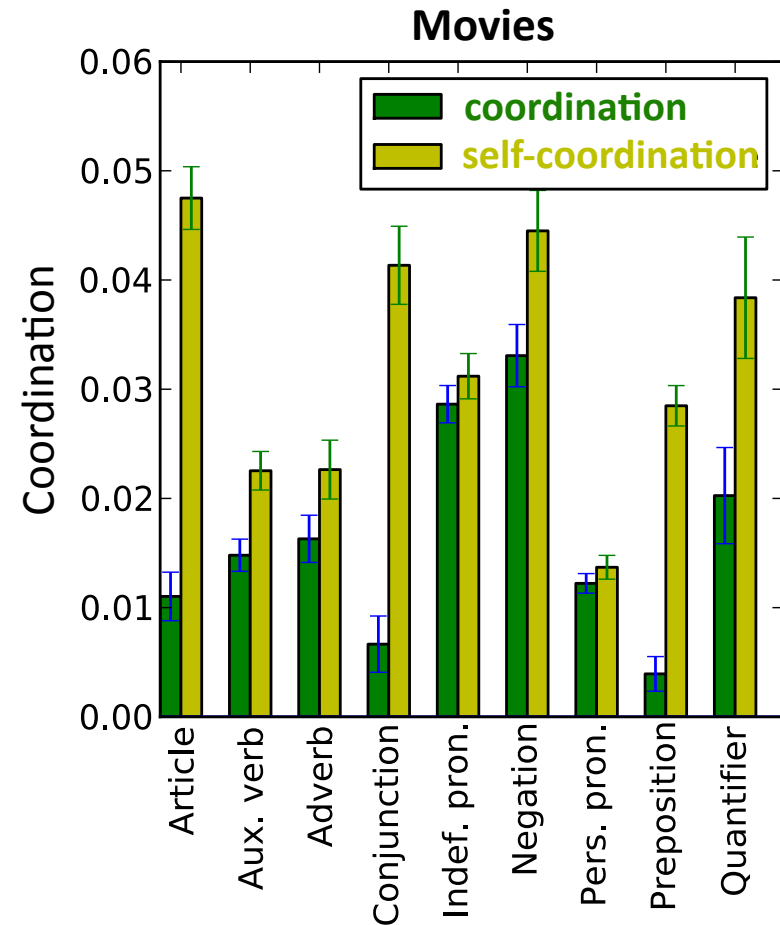

Movie characters vs. real people

Compare amount of coordination for each dimension:

Movie characters vs. real people

Movie characters vs. real people

Potential application in detecting faked conversations.

Effects of social features

In real life, some people coordinate more than others:

e.g.,

effects of gender [Ireland & Pennebacker, 2010, Bilous and Krauss, 1988]

effects of social status [Thakerar et al., 1982; Gregory and Webster, 1996]

Effects of **imagined** social features?

In real life, some people coordinate more than others:

e.g.,

effects of gender [Ireland & Pennebacker, 2010, Bilous and Krauss, 1988]

effects of social status [Thakerar et al., 1982; Gregory and Webster, 1996]

Do such effects carry on when
the social features are **imagined**?

Effects of **imagined** social features?

In real life, some people coordinate more than others:

e.g.,

effects of gender [Ireland & Pennebacker, 2010, Bilous and Krauss, 1988]

effects of social status [Thakerar et al., 1982; Gregory and Webster, 1996]

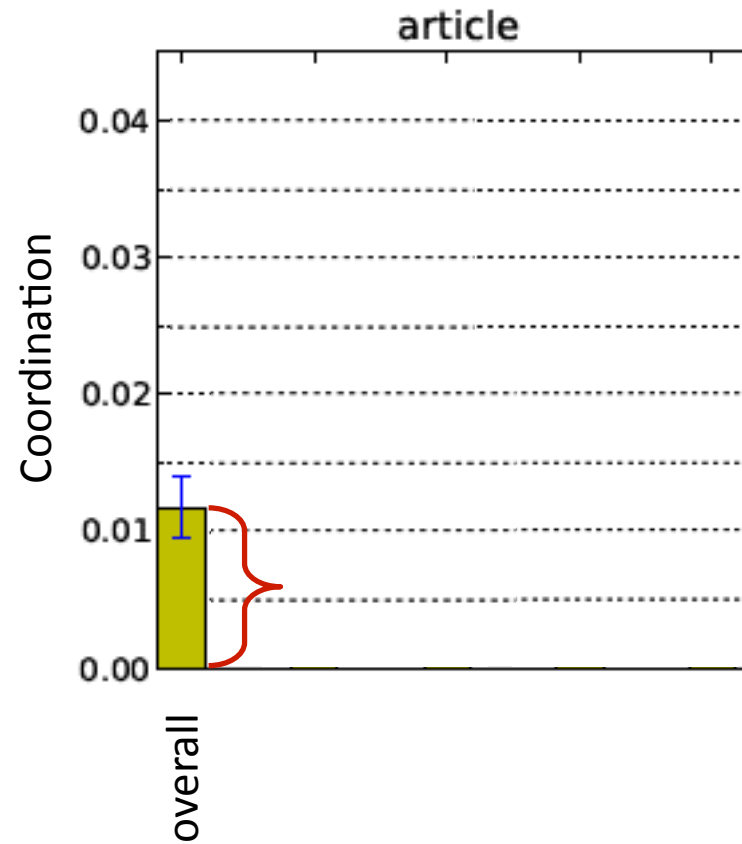

Do such effects carry on when
the social features are **imagined**?

Have preconceptions about how certain people
coordinate become embedded in this reflex?

Effects of **imagined** gender

Proxy for the gender of movie characters:
gender of the respective actors

Effects of **imagined** gender

Effects of **imagined** gender

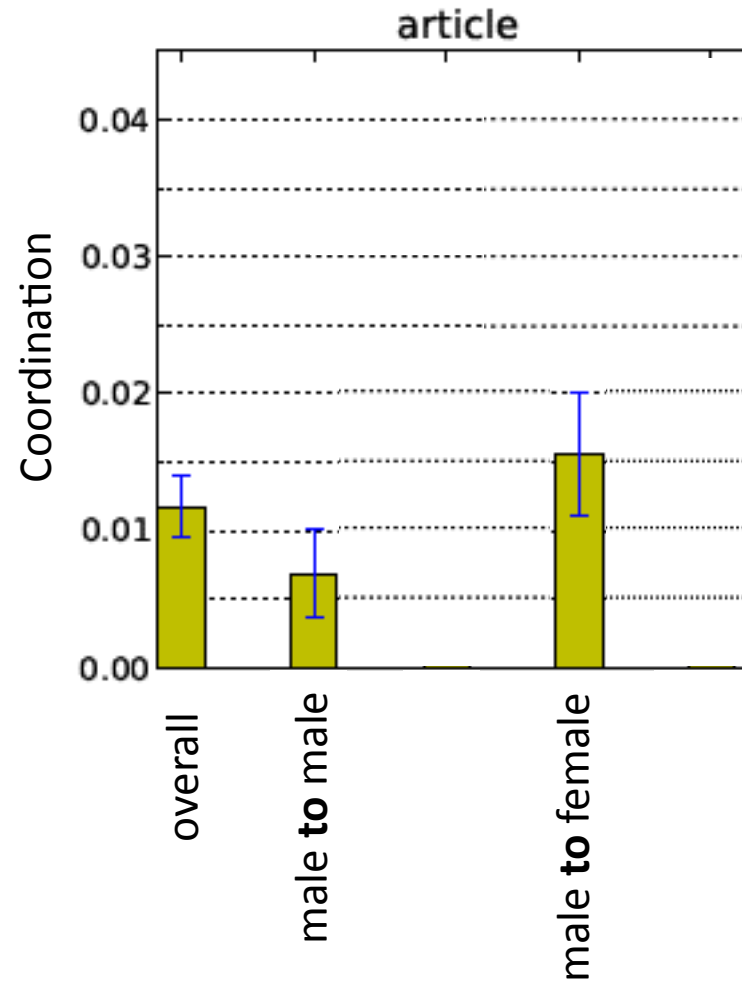

Effects of **imagined** gender

Effects of **imagined** gender

Effects of **imagined** gender

Contributions

Discovered coordination effects in imagined conversations

Insight into the mechanism behind coordination

Preliminary evidence regarding preconceptions relating coordination to various social features

Large-scale, metadata rich corpus of imagined conversations

publicly
available!

Thank you!

VINCENT: I think we oughta leave.

JULES: That's probably a good idea.
